

i2OLB

Open, write, stuff, lick, stamp. Open, write, stuff, lick, stamp... Give your customers a break and take the grind out of paying bills. Our integrated net banking program, i2OLB, delivers the tools your customers need to manage their accounts on-line, conveniently, 24 hours a day, from any Internet connection, while providing the features and functionality they expect. They can even pay their bills, without having to risk a paper cut and taste that yucky adhesive on envelopes!

Free yourself from the hassles of a non-integrated internet banking solution. With IBE, CIF level accounts are automatically added into the i2OLB system, eliminating the hassle of logging into multiple systems to setup an internet banking customer. i2OLB delivers a truly integrated single vendor multi-factor authentication solution. For consumer accounts, a robust web based authentication application is used, and for high risk commercial cash management accounts, token based authentication solutions are implemented.

Implement a solution that satisfies the instant gratification needs of many customers. That's why Integrated Bank Technology includes in its standard solution; unlimited transactions, accounts, single sign on bill pay, password reset, statement e-delivery, ACH, wires, stops, holds, transfers, research, secure messaging, and more – with no additional or ongoing transaction fees. Additionally, cash management accounts include controls on exposure limits and days. Set an overall maximum overall period of days or a limit per day. You can also select by account what types of services will be offered.

By providing comprehensive applications like i2OLB, you will enhance your product delivery methods and further customer retention.
